MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 74, No. 249 January 2005

Andrei Drăgănescu, Todd F. Dupont, and L. Ridgway Scott, Failure of the discrete maximum principle for an elliptic finite element problem 1

Dietrich Braess and Pingbing Ming, A finite element method for nearly incompressible elasticity problems 25

Vivette Girault, Béatrice Rivière, and Mary F. Wheeler, A discontinuous Galerkin method with nonoverlapping domain decomposition for the Stokes and Navier-Stokes problems 53

Ohannes Karakashian and Charalambos Makridakis, Convergence of a continuous Galerkin method with mesh modification for nonlinear wave equations 85

Theodoros Katsaounis and Chiara Simeoni, First and second order error estimates for the Upwind Source at Interface method 103

Alfredo Bermúdez, Rodolfo Rodríguez, and Pilar Salgado, Numerical treatment of realistic boundary conditions for the eddy current problem in an electrode via Lagrange multipliers 123

Martin J. Gander and Laurence Halpern, Absorbing boundary conditions for the wave equation and parallel computing 153

Olivier Vacus, Mathematical analysis of absorbing boundary conditions for the wave equation: the corner problem 177

L. Ferracina and M. N. Spijker, An extension and analysis of the Shu-Osher representation of Runge-Kutta methods 201

Guðbjörn F. Jónsson and Stephen A. Vavasis, Accurate solution of polynomial equations using Macaulay resultant matrices 221

Ivan G. Ivanov, Vejdi I. Hasanov, and Frank Uhlig, Improved methods and starting values to solve the matrix equations $X \pm A^*X^{-1}A = I$ iteratively 263

Dorota Dąbrowska, Recovering signals from inner products involving prolate spheroidals in the presence of jitter 279

Emil Cătinaş, The inexact, inexact perturbed, and quasi-Newton methods are equivalent models 291

Chris Connell, A solution to certain polynomial equations with applications to nonlinear fitting 303

Richard D. Neidinger, Directions for computing truncated multivariate Taylor series 321

C. F. Bracciali, Xin Li, and A. Sri Ranga, Real orthogonal polynomials in frequency analysis 341

Holger Then, Maaß cusp forms for large eigenvalues 363

Georges Rhin and Qiang Wu, On the absolute Mahler measure of polynomials having all zeros in a sector. II 383

Abdolali Basiri, Andreas Enge, Jean-Charles Faugère, and Nicolas Gürel, The arithmetic of Jacobian groups of superelliptic cubics 389

J. Miret, R. Moreno, A. Rio, and M. Valls, Determining the 2-Sylow subgroup of an elliptic curve over a finite field 411

P. Gaudry and É. Schost, Modular equations for hyperelliptic curves ... 429
Amod Agashe and William Stein, with an appendix by J. Cremona and B. Mazur, Visible evidence for the Birch and Swinnerton-Dyer conjecture for modular abelian varieties of analytic rank zero 455
Marston Conder and Peter Dobcsányi, Applications and adaptations of the low index subgroups procedure 485
Kenji Koike and Annegret Weng, Construction of CM Picard curves ... 499
Reviews and Descriptions of Tables and Books 519
Germund Dahlquist and Åke Björck **1**, M. Feistauer, J. Felcman, and I. Straskraba **2**

Vol. 74, No. 250 **April 2005**

Ricardo H. Nochetto and Jae-Hong Pyo, Error estimates for semi-discrete gauge methods for the Navier-Stokes equations 521
Shangyou Zhang, A new family of stable mixed finite elements for the 3D Stokes equations 543
Ivan P. Gavrilyuk and Volodymyr L. Makarov, Algorithms without accuracy saturation for evolution equations in Hilbert and Banach spaces 555
Gerard Awanou and Ming-Jun Lai, Trivariate spline approximations of 3D Navier-Stokes equations 585
Hongkai Zhao, A fast sweeping method for Eikonal equations 603
Z. Wang and R. Wong, Linear difference equations with transition points 629
Ken'ichiro Tanaka, Masaaki Sugihara, and Kazuo Murota, Numerical indefinite integration by double exponential sinc method 655
Ivan P. Gavrilyuk, Wolfgang Hackbusch, and Boris N. Khoromskij, Data-sparse approximation to a class of operator-valued functions 681
Xingping Sun, Strictly positive definite functions on the unit circle 709
S.-L. Qiu and M. Vuorinen, Some properties of the gamma and psi functions, with applications 723
Francis J. Narcowich, Joseph D. Ward, and Holger Wendland, Sobolev bounds on functions with scattered zeros, with applications to radial basis function surface fitting 743
Christian Lubich, On variational approximations in quantum molecular dynamics 765
Yao-Lin Jiang and Richard M. M. Chen, Computing periodic solutions of linear differential-algebraic equations by waveform relaxation 781
Muhammed I. Syam, Conjugate gradient predictor corrector method for solving large scale problems 805
Xinlong Zhou, Subdivision schemes with nonnegative masks 819
Bahman Kalantari, An infinite family of bounds on zeros of analytic functions and relationship to Smale's bound 841

Yingquan Wu and Christoforos N. Hadjicostis, On solving composite power polynomial equations 853
Zhonggang Zeng, Computing multiple roots of inexact polynomials 869
Chris Hurlburt, Computing isogeny covariant differential modular forms 905
Wilfrid Keller and Jörg Richstein, Solutions of the congruence $a^{p-1} \equiv 1 \pmod{p^r}$ 927
Christian Wittmann, p-class groups of certain extensions of degree p 937
Samir Siksek, On standardized models of isogenous elliptic curves 949
Hwanyup Jung, Sunghan Bae, and Jaehyun Ahn, Determinant formulas for class numbers in function fields 953
Jerzy Browkin, Tame kernels of cubic cyclic fields 967
Richard P. Brent, Samuli Larvala, and Paul Zimmermann, A primitive trinomial of degree 6972593 1001
Kevin G. Hare, More on the total number of prime factors of an odd perfect number 1003
Zhenxiang Zhang, Finding C_3-strong pseudoprimes 1009
Yong-Gao Chen, Five consecutive positive odd numbers, none of which can be expressed as a sum of two prime powers 1025
Reviews and Descriptions of Tables and Books 1033
L. H. Harper **3**, Wolfgang Bangerth and Rolf Rannacher **4**, Jean-Paul Allouche and Jeffrey Shallit **5**, Avram Sidi **6**, Louis Komzsik **7**, Peter Monk **8**, Pavel Šolín, Karel Segeth, and Ivo Doležel **9**

Vol. 74, No. 251 **July 2005**

Bruce P. Ayati and Todd F. Dupont, Convergence of a step-doubling Galerkin method for parabolic problems 1053
Bernardo Cockburn, Guido Kanschat, and Dominik Schötzau, A locally conservative LDG method for the incompressible Navier-Stokes equations 1067
Hongsen Chen, Pointwise error estimates of the local discontinuous Galerkin method for a second order elliptic problem 1097
A. Bergam, C. Bernardi, and Z. Mghazli, A posteriori analysis of the finite element discretization of some parabolic equations 1117
Steffen Börm and Stefan A. Sauter, BEM with linear complexity for the classical boundary integral operators 1139
Mario Bebendorf, Efficient inversion of the Galerkin matrix of general second-order elliptic operators with nonsmooth coefficients 1179
Yinnian He, Optimal error estimate of the penalty finite element method for the time-dependent Navier-Stokes equations 1201
Adam M. Oberman, A convergent difference scheme for the infinity Laplacian: Construction of absolutely minimizing Lipschitz extensions 1217
Serge Kräutle, A domain decomposition method using efficient interface-acting preconditioners 1231

Qiang Du and Lili Ju, Approximations of a Ginzburg-Landau model for superconducting hollow spheres based on spherical centroidal Voronoi tessellations 1257
M. T. Nair and Shine Lal, A finite dimensional realization of the mollifier method for compact operator equations 1281
Yves Achdou, Bruno Franchi, and Nicoletta Tchou, A partial differential equation connected to option pricing with stochastic volatility: regularity results and discretization 1291
Charles K. Chui and Qingtang Jiang, Balanced multi-wavelets in $\mathbb{R}^s$ ... 1323
Bin Han, Thomas P.-Y. Yu, and Yonggang Xue, Noninterpolatory Hermite subdivision schemes 1345
Charles K. Chui and Qingtang Jiang, Refinable bivariate quartic C^2-splines for multi-level data representation and surface display 1369
